

**Display:** when we run a code the first GUI would be like this. Here, everything is blank. At the bottom, there are three buttons to make changes in a data.

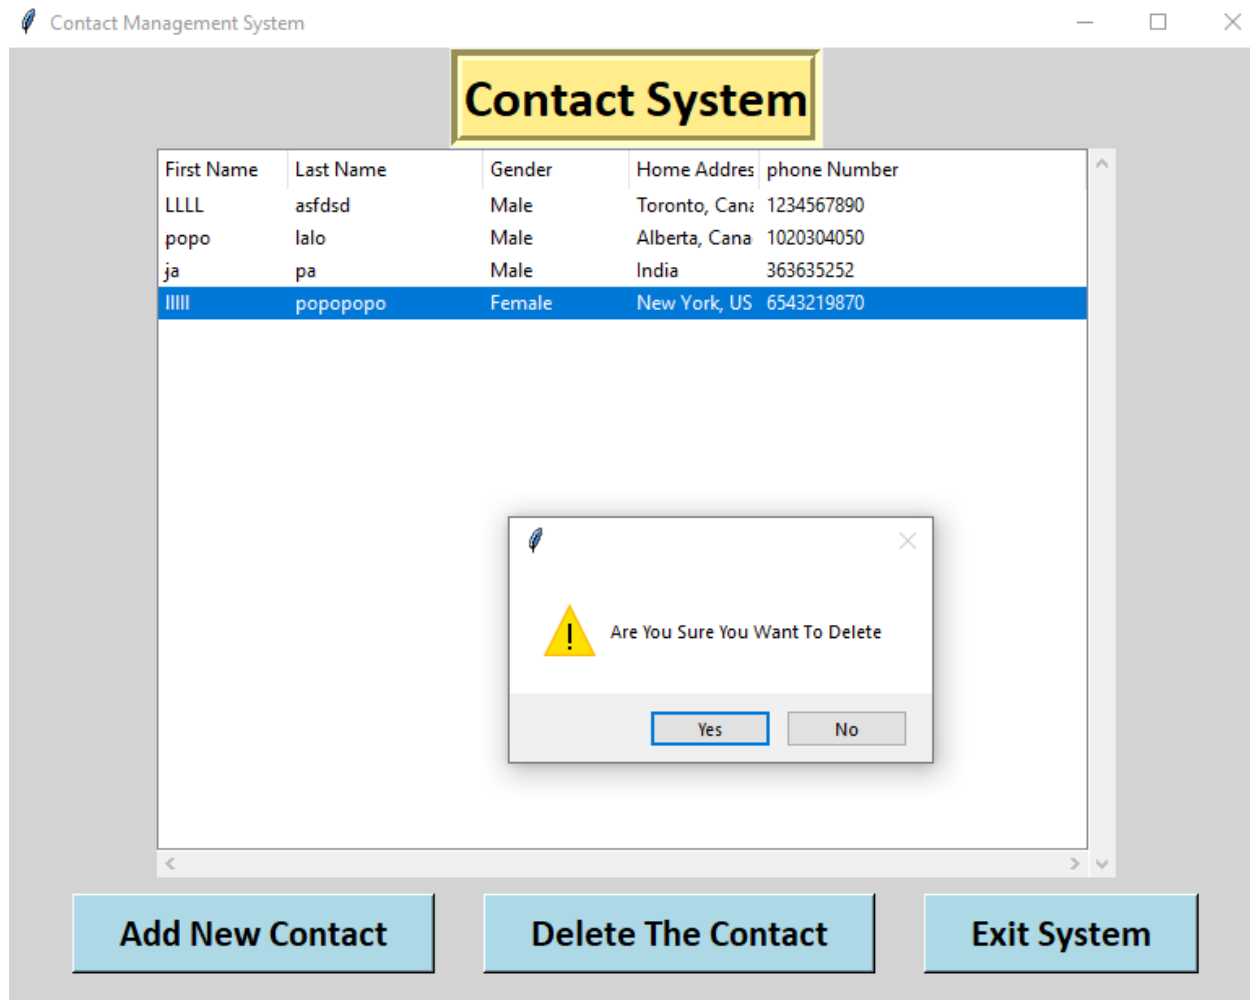

First Name	Last Name	Gender	Home Address	phone Number
LLLL	asfdd	Male	Toronto, Cana	1234567890
popo	lalo	Male	Alberta, Cana	1020304050
ja	pa	Male	India	363635252
IIII	popopopo	Female	New York, US	6543219870

**ADD Button:** If we click on add new contact button, system will ask for name, gender, address and phone number. Please save button will save the data.

**Delete Button:** If user click on a delete button, so system will want a confirmation from user and remove that data from database.

**Update Button:** If user want to update information so user can double click on data so update the contact information page will pop-up. We can edit the data over there

The screenshot displays a 'Contact Management System' window with a table of contacts and an 'Update the Contact Information' pop-up window.

**Contact System Table:**

First Name	Last Name	Gender	Home Address	phone Number
LLLL	asfdd	Male	Toronto, Can	1234567890
popo	lalo	Male	Alberta, Cana	1020304050
ja	pa	Male	India	363635252
lllll	popopopo	Female	New York, US	6543219870

**Update the Contact Information Form:**

First Name:

Last Name:

Gender: ☒ Male ☐ Female

Home Address:

Phone Number:

**Main System Buttons:**

- Add New Contact
- Delete The Contact
- Exit System

**Exit System Button:** At last, if user press on exit system button GUI will be closed and program will be closed.
